

## Task – Day Two

1. Create a new Django project named **ecommerce**.
2. Inside the project, create an app named **product**.
3. In the product app, do the following:
  - Create a **static data source** that contains **10 products**, each with the following fields:
    - id
    - name
    - type
    - price
    - description
  - Display **all products** in a **table** on the main page.
  - Each product name or button should link to a **detail page** showing full product information:
    - Product Image
    - Product ID
    - Name
    - Description
    - Type
    - Price
  - On the detail page, include a **link/button** to return to the **all products** page.
